Abstract—BidSell, an online auction platform, bridges the gap in secure and user-friendly bidding systems in the Bangladeshi market. The system, featuring distinct Buyer, Seller, and Admin panels, allows seamless product listing, bidding, and system management. Designed to address the limitations of existing platforms like AdminDeal and Slibuy, BidSell offers enhanced user verification, real-time bidding, and mobile compatibility. Built using Agile methodology, the platform incorporates scalable technologies like Java, Firebase Firestore, and Firebase Authentication. Future enhancements include AI-driven fraud detection and web-based applications to further improve its usability and scope.

Index Terms—Online Auction Platform, Real-Time Bidding, User Verification, Secure Transactions, Scalable Infrastructure.

I. INTRODUCTION

BidSell was conceptualized to address the lack of accessible and efficient auction systems in Bangladesh. Unlike existing platforms, BidSell focuses on dynamic bidding processes, robust user verification, and intuitive design. The platform supports seamless and secure transactions, thereby promoting trust and user engagement.

II. BACKGROUND STUDIES

The proposed auction app is designed to address the limitations of existing platforms like AdminDeal, Slibuy, and Bikroy.com while offering innovative features for a better user experience.

III. LIMITATIONS OF EXISTING SYSTEMS

A. AdminDeal

- No user verification, leading to trust issues and fake bids.
- Lack of real-time bidding, making auctions less engaging.

B. Slibuy

- Poor user interface and notifications, resulting in low user engagement.

C. Bikroy.com

- No bidding system; only direct transactions.
- Inefficient price negotiations, causing delays.

IV. PROPOSED FEATURES

A. Trust and Verification

- Mandatory email and phone verification to ensure genuine users.

B. Real-Time Bidding

- Live updates on bids to create an exciting and competitive auction environment.

C. Modern and Responsive Design

- A user-friendly interface with intuitive navigation for buyers and sellers.

D. Secure Transactions

- Integration with trusted payment gateways for safe and seamless payments.

V. ECONOMIC BENEFITS

A. For Sellers

- Easy product listing and wider audience reach.
- Real-time bidding helps maximize product value.

B. For Buyers

- Transparent bidding process and fair competition.

C. For the Community

- Encourages trust through verified profiles.
- Promotes sustainable commerce and repeat usage.

VI. REVENUE MODEL

A. Advertising

- Banner ads, promoted listings, and sponsored categories.

B. Seller Commission

- A small fee deducted from seller payments.

C. Premium Features for Buyers

- Options like automated bidding and priority notifications.

VII. METHODOLOGY

The Agile methodology was adopted for its iterative and flexible approach, emphasizing collaboration, continuous improvement, and user-centric design. Core functionalities include:

- **Login Module:** Secure user authentication.
- **Auction Module:** Real-time bidding.
- **Admin Controls:** Managing user accounts and auctions.
- **Payment Gateway:** Secure financial transactions.

Technologies such as Java, XML, Firebase Firestore, and Firebase Authentication were used to ensure scalability, reliability, and real-time updates.

VIII. IMPLEMENTATION

The platform is implemented in three major panels:

- 1) **User Panel:** Allows buyers to bid on auctions and sellers to manage their listings.
- 2) **Admin Panel:** Ensures smooth operations through user management, auction approvals, and system monitoring.

IX. RESULTS

BidSell successfully developed a secure, transparent, and efficient auction platform tailored to the local market. It promotes economic growth by empowering individuals and businesses to engage in digital commerce. The system's robust architecture ensures scalability and adaptability for future enhancements.

X. LIMITATIONS

Despite its features, BidSell has limitations such as:

- **Platform Dependency:** Limited to Android, excluding iOS and desktop web users.
- **Lack of Advanced Auction Features:** Missing functionalities like automated bidding, predictive analytics, and detailed insights.
- **Limited Personalization:** Lacks advanced algorithms for personalized recommendations.
- **Language Support:** Only available in English, excluding users preferring local languages like Bangla.
- **Fraud Prevention:** Basic user verification without AI-powered fraud detection.
- **Notification System:** No specific alerts for upcoming auctions or immediate updates for outbid notifications.

XI. FUTURE WORK

Future development will focus on:

- **Web Application:** Develop a responsive web platform to enhance accessibility for desktop and browser users.
- **Payment System:** Expand support for localized payment gateways, automate invoicing, and provide detailed transaction analytics.
- **Fraud Detection:** Implement AI-driven systems to detect and prevent fraudulent activities.
- **Auction Features:** Add automated bidding, real-time monitoring, and auction analytics tools.
- **Personalization:** Integrate machine learning for personalized recommendations and introduce multilingual support.
- **Admin and Seller Tools:** Enhance admin controls with advanced reporting, and provide sellers with real-time performance dashboards.

XII. CONCLUSION

BidSell not only addresses critical gaps in the Bangladeshi e-commerce landscape but also contributes to its digital transformation. With a roadmap for continuous improvement, BidSell has the potential to become a cornerstone in the region's online auction ecosystem.

ACKNOWLEDGMENTS

We express our gratitude to the Almighty Allah for enabling us to complete this capstone project successfully. We extend heartfelt thanks to our honorable supervisor, A. S. M. Shafi, Assistant Professor at the Department of Computer Science and Engineering, UITS, for his invaluable guidance, tireless supervision, and encouragement throughout the project. Additionally, we thank our supervisory committee members, Al Imtiaz, Associate Professor; Md. Ismail, Lecturer; and Engineer Md. Safaet Hossain, Associate Professor, for their insightful comments and support. Lastly, we are deeply grateful to our families for their unwavering mental and emotional support during this journey.
